DETAILED ACTION

Drawings

1. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the "one printhead module comprises at least two printhead integrated circuits" must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 1-7 are objected to because of the following informalities:

In claim 1 it cannot be clearly understood how "one printhead module comprises at least two printhead integrated circuits". The Figures show one printhead integrated circuit for each printhead module. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by WO 02/0766748.

WO 02/076748 discloses a printhead assembly (Fig. 9), comprising: 1) at least one printhead module (11) comprising at least two printhead integrated circuits (wire bond 25), each of which has nozzles (62) (Fig. 16) formed therein for delivering printing fluid onto the surface of print media, 2) a support member (upper micromolding 28 and lower micromolding 34 supporting and carrying the printing fluid to the at least two printhead integrated circuits (page 7, lns 1-15), 3) an electrical connector (pitch flex PCB 26) for connecting electrical signals to the at least two printhead integrated circuits, 4) drive electronic (flex PCB 17 arranged to control the printing operation of at least one of the at least two printhead integrated circuits via the electrical connector (page 5, lns 19-21), 5) a plurality of longitudinally extending electrical conductors for providing power from a power supply to the drive electronics and the at least two printhead integrated circuits (page 8, lns 11-14, 6) a casing (capping device 12) comprising a support frame

supporting the at least one printhead module, and 7) at least one mounting element (channel 16) held by the support frame (page 5, lns 22-23), the at least one mounting element mounting the drive electronics and electrical conductors and incorporates a clamping arrangement for clamping the at least one printhead module to the support frame (as seen in Fig. 9).

Allowable Subject Matter

5. Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 3-6 will be allowed when claim 2 is rewritten in independent form including all of the limitations of the base claim and any intervening claims.
